

# Performance JETS™

## SAFELY ACCELERATING PRODUCT TO MARKET

Performance JETS is a cloud-based software and systems development platform. JETS provides a virtual hardware environment for your embedded system, which emulates your hardware in a virtual machine, providing developers with a debugging and integration environment that runs on the developer's desktop or in the cloud. It enables scalable and automated continuous integration for debugging, testing and certification.

### **Shorten Time to Market.**

Reduce the time to complete both software and systems tests by 2x.

### **Increase Safety.**

Develop higher quality safety critical software through continuous testing and integration.

### **Reduce Hardware Costs.**

Use JETS Virtual Machines as a hardware replacement for a typical savings of 10x.

### **Certification Credit with FAA.**

Use JETS Virtual Machines as a formal execution environment.
