

**Performance**  
Seeing Things Differently

# DATA LOADING MADE EASY

Unsure how to fit data load into your next project? Project Managers frequently express concerns about the complexities and costs of data load implementations. Schedule pressures and the technical expertise required are often underestimated, leading to rash decisions and rushed efforts. This ultimately impacts data loading performance and usability, and results in user frustration.

Introducing the **Performance On-Board Data Load Client/Server**. Leverage Performance's proven software components to accelerate customized ARINC-615A Client and/or Server development at a fraction of typical data loader project costs.

Performance used decades of data loading experience to develop robust requirements, software, test framework, and key processes that make custom data load development and integration EASY.

## AEROSPACE-GRADE

Receive a high-quality and certifiable solution based on robust requirements and continuous testing.

## COST SAVINGS

Save millions compared to typical full lifecycle DO-178C development costs.

## RAPID DEPLOYMENT

Build an operational data loader in months versus years using our proven components and services.

# CLIENT/SERVER

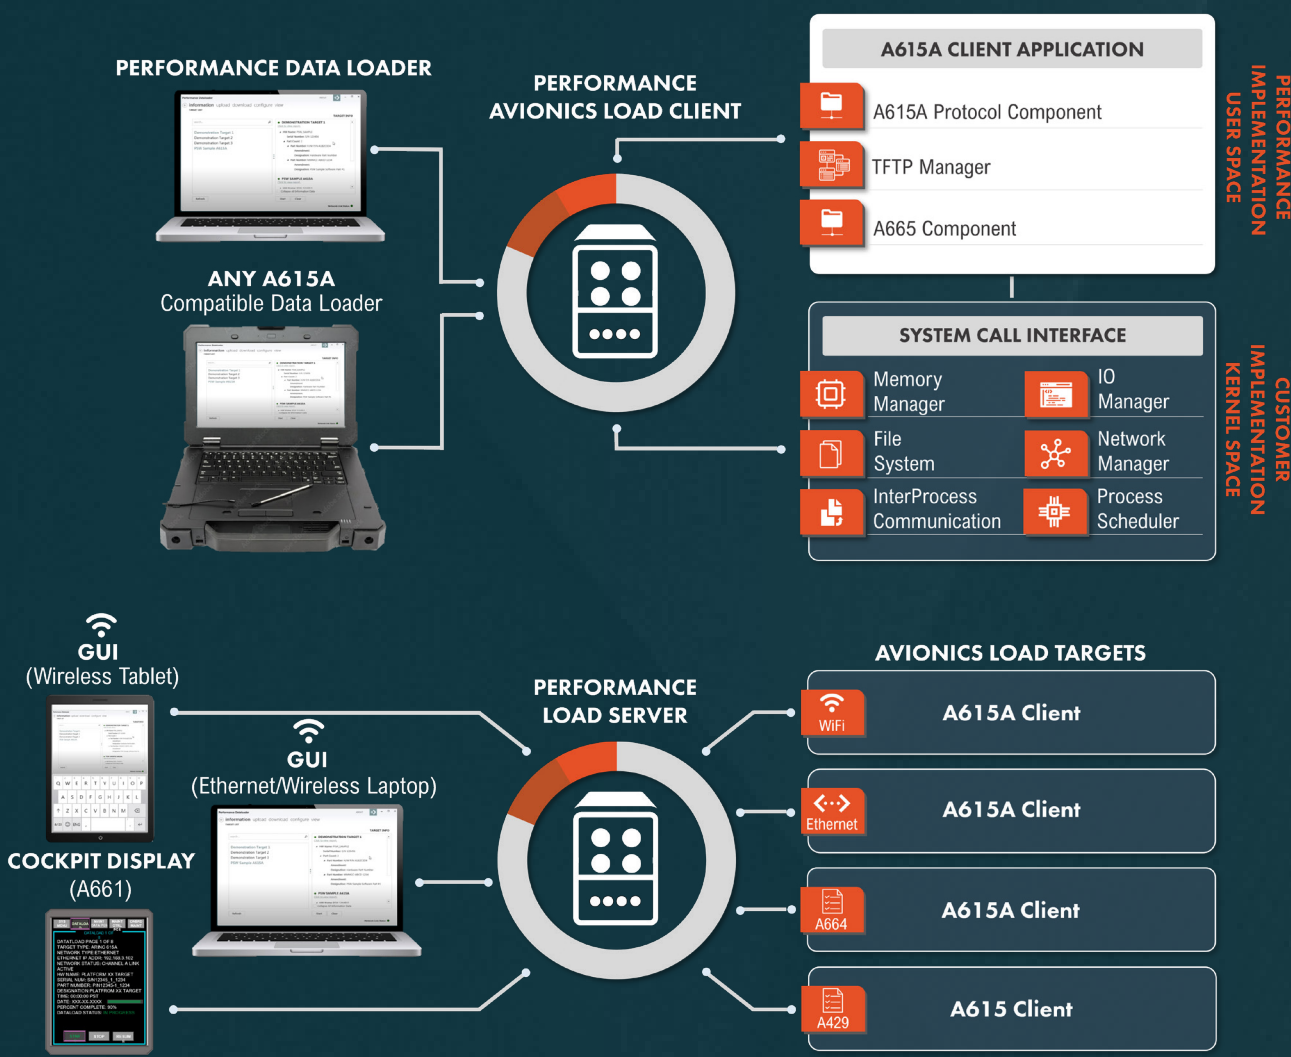

## FEATURES

Performance Data Loader™ components provide ready-to-use implementations of:

- TFTP protocol
- ARINC-615A protocol
- ARINC-665 load header file utilities
- ARINC-615 protocol (server only)

## DIFFERENTIATORS

- Flexibility to integrate into any system
- Development and integration services
- Designed with speed optimization and quality
